Step or Model Subassembly Complete
-Good Job!

Optional Assembly
-There are a variety of parts that may be used at this step

READ THIS FIRST: Before assembling your fine-detail resin cast model kit, please read through this assembly guide to familiarize yourself with the steps involved. Fine detail plastic snips or clippers and a hobby knife, should be used to carefully trim the parts from the component frames and to remove resin pour spouts. Occasionally, a small hobby saw should be used to separate large resin parts from thicker frame connections. Take care to work slowly when trimming excess resin from parts, removing a little at a time to avoid damaging the part. It is advised that this step be carried out by an adult, or under adult supervision and that proper safety precautions are taken.

Use a small file, emery board, or fine grit sandpaper to smooth out areas where excess resin has been trimmed away, or to reduce the visibility of mold lines.

It is a good idea to wash your resin parts in a bowl of mild soap and water before gluing or painting any components. This helps to remove dust and dirt, as well as any excess oils that may have accumulated on the parts during storage or trimming.

If you find a part to be warped slightly out of place, use a hair dryer, warm water, or a nesting chicken, to heat the part until the resin becomes slightly flexible. You can then SLOWLY bend the part back into shape. While holding it in place, remove it to cool air or water in order to reset the resin part in the corrected shape.

RIGHT HAND

3

Khorsekef's Crown

! **🔍**
Be careful when removing the crown from the spru, the wing tips will break if pressure is applied.

! **🔍**
Be sure to carefully file away any excess resin after removing crown from spru so components may align correctly.

Continue with assembly from step 2

4

Khorsekef's Bandage Flying Stand

! **🔍**
Khorsekef's flowing bandages are arranged on two unique sprus. The spru containing the head and arm components, also holds the Left Arm bandage (Step 7) as well as the Back bandage (Step 6)

The spru featuring the large, flying stand bandage cluster, also contains the Right Arm bandage (Step 7) and the Front bandage (Step 5).

Key Back

Key Right Calf

Key Left Foot Heal

Key Right Foot

!
Pay careful attention to the small 'keys' which protrude from the bandage base cluster.
